

First Aid Report

Conversation:

You: hi

Bot: Hello! How can I assist you with your first aid needs today?

You: i have burn

Bot: I'm sorry to hear that you've been burned. Here are some steps you can follow:

1. First, make sure you're safe from further burns. Remove yourself from the source of the burn.
2. Cool the burn under cool (not cold) running water for 10-20 minutes or until the pain eases.
3. Remove any jewelry or clothing near the burn (unless it's stuck to the burn).
4. Keep the burn clean. You can cover it with a sterile non-stick dressing, like plastic wrap or a clean plastic bag.
5. Don't break any blisters or apply any creams or ointments. This can cause infection.
6. Over-the-counter pain relievers, like ibuprofen, can help with pain.

Remember, if the burn is severe, especially if it's larger than your hand, it's on the face, hands, feet, genitals, buttocks, or a major joint, or if the person is in shock, you should call emergency services immediately. Severe burns need professional medical attention.
